

Call for Papers

We are pleased to announce that Numerical Algebra, Control and Optimization (NACO) will publish up to five papers for the 5th China-Australia Workshop on Optimization Theory, Methods and Applications --- Doctoral Forum on Operations Research and Control Theory. We cordially invite the participants of the doctoral forum (including those given presentations and posters) to submit papers to NACO.

All papers (in PDF format) should be sent to the guest editors by email and the review of each submission will start as soon as it is received. The submission deadline is May 1, 2012, and the accepted papers are scheduled to be published in 2012. We would like to take this opportunity to thank you for your support and are looking forward to receiving a paper from you soon.

NACO is an international journal devoted to publishing peer-refereed high quality original papers on any non-trivial interplay between numerical linear algebra, control and optimization. The prime objective of NACO is to provide a single forum for and to promote collaboration between researchers and practitioners in these areas. It is a new journal and its first issue was published in 2011. For more information about NACO, please visit:
